Projects

Diamond paper reproduction / https://github.com/mlarnouhet/diamond
Trained an actor-critic agent inside a diffusion world model to play Atari games.

Planet paper reproduction / https://github.com/mlarnouhet/Planet
Trained a world model on environments from the Deepmind Control Suite that uses online planning in latent space to solve the environment.

Experience

August 2025 – February 2026

Engineering Intern, Alten
Improved a 3D reconstruction pipeline (VGGT) by distilling a Vision Transformer into a linear complexity Vision-RWKV image encoder, improving scalability for high-resolution images.

November 2023 – April 2024

Master thesis, Chalmers University of Technology
Developed a method to perform novel view synthesis with diffusion models, leveraging textual inversion to condition a frozen diffusion model on camera parameters.

Skills

Languages/Frameworks: Python, Pytorch, Matlab, Triton, C++/Cuda
Infrastructure/Cloud: Docker, Github
Machine Learning libraries: Hugging face libraries (Transformers, Accelerate, Diffusers, Trl), vLLM

Education

2024 - 2026

Mastère spécialisé / Post-Master Program, Télécom Paris (Palaiseau)
Program of specialization in Artificial Intelligence

2022 - 2024

Master's Degree, Chalmers University of Technology (Gothenburg)
Information and Communication Technology

2020 - 2022

Engineering program, ENSEEIHT Grande école (Toulouse)
Electronics, electrical energy and automation department

2018 - 2020

CPGE (Preparatory classes for French Grandes Ecoles) MPSI/MP*, Lycée Blaise-Pascal (Clermont-Ferrand)
Two-years undergraduate intensive courses in mathematics and physics preparing for the entrance exams for the French Grandes Ecoles.
